WeatherWise Travel Dashboard

Completed Assessments

This

- Technical Assessment for App
- Tech Assessment for Weather App

Overview

WeatherWise Travel Dashboard is a full-stack weather intelligence app that allows users to search for real-time weather information by city, ZIP code, or GPS coordinates. The app retrieves live weather data, displays a 5-day forecast, provides weather icons, shows Google Maps location data, adds air quality information, stores weather searches in a SQLite database, supports CRUD operations, and allows data export to JSON and CSV.

Features

Frontend

- Built with Next.js, TypeScript, and Tailwind CSS
- Responsive layout for desktop, tablet, and mobile
- Search by city, ZIP code, or coordinates
- Current location button using browser geolocation
- Current weather display
- 5-day forecast grid

- Weather icons
- Google Maps embed
- Air quality display
- Travel and health recommendations
- Saved weather history table
- Edit and delete saved weather records
- Export JSON and CSV buttons
- PM Accelerator information section

Backend

- Built with FastAPI and Python
- RESTful API architecture
- SQLite database persistence
- SQLAlchemy ORM
- OpenWeatherMap API integration
- Open-Meteo Air Quality API integration
- Full CRUD operations
- Location validation
- Date range validation
- Error handling
- JSON export
- CSV export

Tech Stack

Frontend

- Next.js
- React
- TypeScript
- Tailwind CSS

Backend

- Python
- FastAPI
- SQLite
- SQLAlchemy
- Pandas

APIs

- OpenWeatherMap API
- Open-Meteo Air Quality API
- Google Maps Embed
